COVER LETTER

Dear Hiring Committee,

With Microsoft's mission to empower every person and every organization on the planet to achieve more, I feel an immediate connection to the way I build products—always with the end-user's growth in mind.
At Bullet Internet Services, I led the creation of an AI-powered language-learning platform (Android, iOS, Web) that delivers real-time conversational assistance. The experience sharpened my skill for turning cutting-edge research into inclusive, scalable features—echoing Microsoft's commitment to accessible, human-centric innovation.

Earlier at SaralTech, I owned both UI and backend components for a matrimony app and a full-featured e-commerce platform. Balancing rapid iterations with rock-solid reliability taught me to create clarity, generate energy, and deliver success—the very leadership principles Microsoft champions.
Beyond product work, I live a growth mindset: 900+ data-structures-and-algorithms problems solved (LeetCode Knight, 1830+ rating; Codeforces), constant up-skilling in Java, Spring Boot, Flutter, and Firebase, and active peer-mentorship within my institute.

I'm excited by Microsoft's collaborative culture—where diverse perspectives fuel bold ideas—and by the chance to contribute as an SDE Intern. I bring a full-stack toolkit, a record of shipping high-impact features under dynamic requirements, and an engineering mindset driven by curiosity and customer obsession.
I look forward to transforming challenges into opportunities at Microsoft and growing through meaningful collaboration with your world-class teams.

Sincerely,

Darpan Khatri
